Deviation Code: DEV-2026-015

Title: Temperature Excursion During API Manufacturing

Description:
During the crystallization process, the reactor temperature increased to 29°C instead of the target range of 20?22°C. The cooling water supply was interrupted for 20 minutes. The final impurity level was found to be 0.16%, exceeding the specification limit of 0.10%.

Product: API-247
Batch Number: BATCH-2026-090
Process Stage: Crystallization
Severity: High
